I want to know how long it takes to get to the next city in the network.

The network is a graph with nodes and edges. The edges are weighted with the distance between nodes.

My first lecture on KOP

- Transport (KOP) means every movement from source to sink / origin to destination
- The entire sector is called **Logistics** (supplies & support)
- **Management** of **flows** (transportation, storage, etc.) and **information** flow across a network of business people
- **Logistics** is **information** flow as well as **material** (physical) flow from source to sink (supplies & support) & **information** flow as well as **material** flow from sink to source (demand)
- **Logistics** also includes a **supply chain** with its various suppliers (from raw materials, through the production of components, to the final product) & **customers** & **distributors**
- **Key** **logistics** **strategy** **for** **business**
 - The **order** or **flow** from **source** to **sink** (from **supplier** to **customer**) is **critical** to **business** (making up **value** for **customer** and **share** in **supply**)
